DETAILED ACTION

Status of Claims

This is to acknowledge the receipt of "Amendment/Require for Reconsideration after Non-final rejection" filed on 3/25/2010. Claims 1-13, 15, 18-23, 25, and 29 have been cancelled; claims 14, 16-17, 24, 26, 27, 31, and 39 are amended; and claims 14, 16-17, 24, 26-28 and 30-44 remain for examination. Claims 14 and 26 are independent claims.

Status of the Previous Rejections

The previous objection of claim 10 under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim is withdrawn in view the applicants' amendment filed 3/25/2010.

Previous rejection of claims 1-7, 9-13, 15-18, 21, 24-28, and 30-44 under 35 U.S.C. 103(a) as being unpatentable over Bilgen et al (DE 19839383 used hereinafter with English equivalent US 6,458,226, thereafter US'226) in view of Hathaway (US 2,261,878, thereafter US'878) and Fritz et al (NPL "Fertigungs Technik" (Manufacturing Technology) 1995, and English translation for Fig.5-24 and 5-26, thereafter NPL-1) is withdrawn in view the applicants' amendment filed 3/25/2010.

Allowable Subject Matter

Claims 14, 16-17, 24, 26-28 and 30-44 are allowed. The following is a statement of reasons for the indication of allowable subject matter:

Art Unit: 1793

Regarding claims 14 and 26, US'226 teaches a process for the thermomechanical treatment of steel for torsionally strained spring elements, comprising the inductive heating of a starting material, particularly spring steel, at a rate between 80-150K/s to a temperature between 900°C to 1200°C (e.g. a temperature above the recrystallization temperature of the initial material), austenitizing, holding the temperature for a short time, forming the material into a formed product at a temperature above the recrystallization temperature, quenching to martensite and tempering. US'226 teaches the material is formed in at least one forming step. US'878 teaches steps of rolling and winding to form a coil spring and NPL-1 teaches skew rolling for the tubes and/or rods. However, the recorded prior arts do not disclose the combination of hot forming and single step of skew rolling in a predetermined twisting manner to obtain desired deformation gradient over a cross section of the rod as recited in the instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delay, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on statement of Reason for Allowance"

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jie Yang whose telephone number is 571-2701884.
